iPad

More powerful than ever. The new Retina display contains 4x more pixels than the iPad 2 for outstanding clarity and sharpness with both text and images. Dual-core A5X chip with quad-core graphics provides a great deal of processing power and speed to compensate for the increase in resolution and delivers the same responsive feeling of the former models. This increase in power and resolution doesn't come at the expense of battery life—the iPad still features up to 10 hours of power between charging.
The rear-facing iSight camera incorporates a 5 megapixel backside illuminated sensor for increased lowlight sensitivity as well as great performance in bright situations. Autofocus, tap-to-focus, and tap to set exposure settings allow you to achieve the best exposure possible in a quick and intuitive manner. Face detection is also supported and recognizes up to 10 different faces for improved exposure and focus settings when photographing people. iSight camera also supports full HD 1080p video recording with automatic image stabilization. The camera utilizes a 5-element f/2.4 lens for sharpness and integrates a hybrid infrared filter for greater color fidelity. For even greater functionality, dictation simply talk in order to type. Speak your emails, texts, notes, or web searches and have the written words automatically appear.
